

INSTRUCTIONS FOR DERMISIL® AF for ATHLETE'S FOOT

Wash affected area with soap and water.

Always Patch Test an Area Before Starting Full Treatment Regimen

Dry affected area completely. Keeping your feet dry are key factors to removing the athlete's foot fungus. You may also want to use talcum or baby powder after your treatment to keep the affected area dry.

Apply Dermisil® AF liquid to the affected areas on your feet with a clean cotton ball, or q-tip. Pay specific attention to between the toes, and webs of the feet. There may be some burning sensation, but do not be alarmed.

Apply 3 times or more per day until the fungus is destroyed. The fungus should start to diminish within 72 hours depending on the severity of the outbreak. It may take up to several weeks to completely eliminate the fungal infestation.

You may also soak your feet in a warm water bath with 20 drops of Dermisil® AF liquid. This should speed healing of your athlete's foot.

Remember, your shoes and socks may be carriers of your fungal infection. Washing and or disposal of your socks and shoes may aid in your recovery.

You may have drying of the skin area where the liquid is applied. This is normal and will subside after the treatment regimen is completed.

The damage left behind from fungal infection will slowly dissipate over several days to several weeks, depending on the level of outbreak.

Note: Active ingredients in DERMISIL® AF are: cymbopogon citratus, melaleuca alternifolia, and other anti-fungal plant extracts.

NEVER apply Dermisil® AF liquid to children under 5 years of age or if you are pregnant or nursing. NEVER apply Dermisil® AF liquid to mucous membranes or to the eyes. NEVER ingest or drink Dermisil® AF liquid. If Dermisil® AF is ingested immediately phone the Poison Control Center.

INSTRUCTIONS FOR DERMISIL® AF for JOCK ITCH

Wash affected area with soap and water.

Always Patch Test an Area Before Starting Full Treatment Regimen

Dry affected area completely. Keeping the genital areas dry are key factors to removing the jock itch fungus. You may also want to use talcum or baby powder after your treatment to keep the affected area dry.

Apply Dermisil® AF liquid to the affected areas with a clean cotton ball, or q-tip. There may be some burning sensation, but do not be alarmed.

Apply 3 times or more per day until the fungus is destroyed. The fungus should start to diminish within 48-72 hours depending on the severity of the outbreak. It may take up to several weeks to completely eliminate the fungal infection.

You may have drying of the skin area where the liquid is applied. This is normal and will subside after the treatment regimen is completed.

The damage left behind from fungal infection will slowly dissipate over several days to several weeks, depending on the level of outbreak.

INSTRUCTIONS FOR DERMISIL® AF for NAIL FUNGUS AND NAIL INFECTION

Wash affected area with soap and water.

Always Patch Test an Area Before Starting Full Treatment Regimen

Dry affected area completely. Keeping your nails (toe/finger) dry are key factors to removing the nail fungus. You may also want to use talcum or baby powder after treatment to keep the affected area dry.

Apply Dermisil® AF liquid to the affected areas of your feet with a clean cotton ball, or q-tip. There may be some burning sensation, but do not be alarmed. Make sure the solution is applied as much as possible underneath the nail as well.

You may soak the area in the liquid for 5-10 minutes. For extreme infection directly in the Dermisil AF extracts.

Apply 3 times per day until the fungus is destroyed. The fungus should start to diminish within 4 weeks. It can take from 2-6 months to eliminate nail infections, because of the slow growth time of the nail. Remember, the nail must completely grow out free of nail fungus before it is completely healthy. If not the nail fungus will return.

You may have drying of the skin area where the liquid is applied. This is normal and will subside after the treatment regimen is completed.

You may also soak your nails in a warm water bath with 20 drops of Dermisil® AF liquid. This should speed healing of nail fungus.

The damage left behind from fungal infection will slowly dissipate over several days to several weeks, depending on the level of outbreak.

Note: Active ingredients in DERMISIL® AF are: cymbopogon citratus, melaleuca alternifolia, and other anti-fungal plant extracts.

NEVER apply Dermisil® AF liquid to children under 5 years of age or if you are pregnant or nursing. NEVER apply Dermisil® AF liquid to mucous membranes or to the eyes. NEVER ingest or drink Dermisil® AF liquid. If Dermisil® AF is ingested immediately phone the Poison Control Center.
